Seminar über Microwave Physics and Atmospheric Physics

Referent/in: Ruben Beynon, IAP, Universität Bern

Titel: Observation of Virga by a Micro Rain Radar

As part of my master's thesis, I am working with Micro Rain Radar data to study virga clouds. In this presentation I want to introduce the Micro Rain Radar and the status of my work. I would like to explain how the Micro Rain Radar works, meaning how and what it measures and what parameters it outputs. Then I would like to introduce you to the topic of virga clouds and show what I am currently working on and what is still planned. Last but not least, I would like to inform you about the data situation, in case you want to access the Micro Rain Radar data for your own research.

Zeit: Freitag, 30. April 2021, 10:15 Uhr
